

Lab 4 - Vibe Coding

High-Low Card Predictor - Deliverables and Evidence

Student: Chaithanya N

Repository: chaithanya2810/55_card_predictor

Assigned Repository: SETAPESU26/55_card_predictor

This document summarizes the tasks completed, Git evidence, video evidence, and Vibe Coding prompts used for Lab 4.

1. Repository Details

Assigned repository

https://github.com/SETAPESU26/55_card_predictor

Individual repository

https://github.com/chaithanya2810/55_card_predictor

The work was completed in the individual fork. No pull request was created to the main SETAPESU26 repository.

2. Work Completed

Task 1 - Fix Card Rank Comparison

Changed higher/lower evaluation to use the existing numeric_rank value instead of comparing rank strings alphabetically. This fixes the ordering of cards such as 10, J, Q, K and A.

Task 2 - Consecutive Win Streak Multipliers

Added streak and multiplier tracking. Consecutive correct predictions increase the multiplier and score reward; an incorrect prediction resets the streak and multiplier. The streak and multiplier are shown in the UI.

Task 3 - Tie Evaluation Rules

Added PUSH handling for equal-rank cards. A tie does not change the score and preserves the current streak.

Task 4 - Side-by-Side Card Reveal

Added a brief reveal state that displays the previous card and the newly drawn card side-by-side before the new card becomes the current card. Input is ignored during the reveal.

3. Git Commit Evidence

Task	Commit	Message
Task 1	28de9cd	Fix card rank comparison from str to numeric
Task 2	3d09bfd	Add consecutive win streak multipliers
Task 3	454e103	Add tie evaluation rules
Task 4	a32871c	Add side-by-side card reveal

Final verification: HEAD and origin/main were both at commit a32871c after pushing Task 4.

4. Before and After Video Evidence

Before video

Shows the original game before code changes, including the original rank-comparison behavior.

Before video link: PASTE-BEFORE-VIDEO-LINK-HERE

File name: before.mp4

After video

Shows the game after Tasks 1-4 were implemented, including the side-by-side reveal, scoring/streak behavior, and PUSH handling.

After video link: PASTE-AFTER-VIDEO-LINK-HERE

File name: after.mp4

Replace the two placeholder links with the actual shareable video links before submitting the PDF.

5. Vibe Coding Prompts

Three main prompts were used. Prompt 2 covered Tasks 2 and 3 so the work stayed within three coding attempts while separate Git commits were maintained for each task.

Prompt 1 - Task 1

```
Fix Task 1 in game_engine.py. Use the existing numeric_rank field instead of alphabetical rank-string comparison. Make the smallest necessary change, keep unrelated functionality unchanged, and return the complete file.
```

Prompt 2 - Tasks 2 and 3

```
Implement Task 2 and Task 3 in game_engine.py only: add consecutive win streak multipliers with reset on an incorrect guess, display streak/multiplier, and treat equal-rank cards as PUSH without changing score or streak. Keep the Task 1 fix and do not implement Task 4.
```

Prompt 3 - Task 4

```
Implement Task 4 in game_engine.py only: show the previous and new cards side-by-side for a brief reveal before making the new card current. Keep Tasks 1-3 working, use the existing Pygame structure, make only the required changes, and do not add extra features.
```

6. Chat History Evidence

Complete Vibe Coding chat history / prompt evidence:

PASTE-CHAT-HISTORY-LINK-HERE

The exported chat history should include all three prompts and the corresponding AI responses used during the implementation.

7. Testing Evidence

Check	Result
Task 1 numeric ordering	Tested. Numerical comparisons work correctly.
Task 2 streak increase	Tested. Consecutive correct guesses increase streak/multiplier.
Task 2 reset	Tested. An incorrect guess resets streak and multiplier.
Task 3 PUSH	Tested. Equal-rank cards show PUSH with unchanged score/streak.
Task 4 reveal	Tested. Previous and new cards appear side-by-side briefly before advancing.

8. Submission Checklist

- Updated individual repository link included.
- Separate commits created for Tasks 1, 2, 3 and 4.
- Before video included and linked.
- After video included and linked.
- Three Vibe Coding prompt snippets included.
- Complete chat history link included.
- Updated code maintained in the repository under the Lab-4 submission structure.

Final note: Replace the three placeholder URLs in this document (before video, after video, and chat history) with the real shareable links before submitting.
